Write a python program to convert two lists into dictionary or tuple pair?

Convert two lists into dictionary or tuple pair

```python
def list_to_dict():
    list1 = [1, 2, 3, 4]
    list2 = ['a', 'b', 'c', 'd']
    # Dictionary mapping
    mapping1 = dict(zip(list1, list2))
    print(mapping1)
    # Tuple pairs
    mapping2 = tuple(zip(list1, list2))
    print(mapping2)
list_to_dict()
```

Output:

{1: 'a', 2: 'b', 3: 'c', 4: 'd'}

((1, 'a'), (2, 'b'), (3, 'c'), (4, 'd'))
